

2016 Range Overview

Windsurfing boards

2016 WELCOME TO THE MAGIC!

For many years I couldn't understand how some boards were faster and easier to turn at the same time, today after almost 30 years of designing boards, I feel as I'm finally starting to understand this feeling we've been calling magic. I couldn't be more stocked to present you with this new 2016 line.

Enjoy the ride

Francisco Goya

Custom PRO - Wave Quad

- Volumes: 68/74/80/86/96/106/116
- Shape: All New range
- Graphics: New

Description: Bigger sizes / Half moon and round squash / 6" from the tail.

Over the years we have been seeing how everybody is getting more out of the bigger sizes, that was our inspiration to upgrade the sizing, and in the same way for the New 116, we felt we were able to put everything in and more, from its bigger predecessor. The Tail shapes evolve throughout the line, starting with smaller half moon tails, growing on width into the middle of the range and turning

into round squash for the bigger shapes, 106 & 116.

Standing at only 6" from the tail, simply imagine how you will be able to turn now! The geometry of each board has been tuned for you to ride them back, as if you were on a surfboard.

Millimeters were tuned on every plane of these boards, shorter, with narrower tails, more parallel outlines between the stance, and so much more. The new rockers have been recharged to be faster, much faster!

With concaves through out and double concaves from middle back, what we call "the ever changing planes" allow these boards to accelerate within no resistance, they simply glide.

Summary

The new shapes will not only surprise you on speed, but also in the turns you will be able to get them on. All I can tell you is to get ready for the magic of wavesailing all over again!

One PRO

- FreeWave Thruster

- Volumes: **78(New Size)/85/95/105/115(New Size)**
- Shape: All New range
- Graphics: New

Description: New Sizes / Faster rocker / Narrower tail

With the all new shapes and the addition of the 78 and 115 size, we are expanding the line and range of use for our worldwide favorite "One" line.

We know that either on the wave or in flat water, the speed is what excites us, so that was the first and foremost element, through out the development of all these new shapes. With a slightly narrower and more parallel outline, specially on the tail area to combine speed and control.

Fast, faster, fastest. There is not a single measurement that wasn't redesigned over and over on these boards, together with the "ever changing bottom planes", starting from concave, to double concave to V of the tail, to the shaper rail edge, rocker and much more.

Thruster drive either for flat water, onshore or offshore funa and fast riding.

Air PRO

- Freestyle Single

- Volumes: **89(New)/99/107**
- Shape: Carry Over + New Size
- Graphics: New

Description: Smaller board= + Control / Powerful tail

The new 89 is smaller all around, still maintaining the same tail area as the 99, adding the control and maneuverability of a shorter, narrower and thinner board, still with all the pop and explosive response to your self inflicting ramps.

Every incarnation of this board is designed with only one purpose in mind, to cater to the latest generation of Freestyle moves.

These boards are purely professional. Used and abused daily by gifted and aspiring talents around the globe. Its short shape and full rail allow for extreme power and rail carving.

The Air is a radical blend between a race board and a wave board, distilled into a very compact outline, plus a few characters such as the Reverse Sliding Bevel and Double Concave Nose unique to freestyle needs.

With 3 sizes we can now say we have a full freestyle line to match all riders and conditions. All the For 2016, all the Air pro will be equipped with US fin boxes.

Carrera PRO

- Full Carbon -Freeride Single

- Volumes: 116/130/144
- Shape: Carry Over
- Graphics: Carry Over

Description: There used to be a time when only Race boards were built like the Carrera. And there is no other Freeride board on the market built like this even today. Thus its name is more than fitting. We set out to create a Freeride board with only the very best composites applied, Racing composites and full carbon construction, bringing the ultimate speed sensation to a broader audience, a sensation that up until now only racers could experience.

The Carrera offers utmost high end performance whenever and where ever you want it. With 116 to 130 to 144 liters the Carrera covers all bases from rough seas to lighter winds to calmer lake conditions, and in that it is just as easy to ride as it is jaw-dropping fast.

Bolt PRO

- Full Carbon -Freerace Single

- Volumes: 95/105/115
- Shape: All New range
- Graphics: New

Description: Racing Rockerline / Concave deck / Tail outcuts
The rocker has an almost continuous flat section from the tail to behind the mast, with the lightest release of the tail for unlimited speed and acceleration.

The concave deck drives the rig power lower and forward on the water adding speed and control to your ride. Tail cutouts bring flotation to the lower speeds, out of the jibes and they reduce the wetted area on the straighter faster lanes. For the construction we

set out to create a Freerace board with only the very best composites applied, Racing composites and Full Carbon construction, bringing the ultimate speed sensation, a sensation that up until now, only racers could experience.

Our goal was to make a board that gets up and planning on the lightest breeze and directly accelerates throughout the gusts, allowing you to comfortably ride on or off the fin with control, while still being able to lean into a carve and get projected out of the jibes. We felt this was the least you could expect from our Freerace board. In a few words, these are the fastest and more comfortable raceboards I have ever ridden.

Surf PRO

- Training

- Volumes: 150/200/220
- Shape: Carry over
- Graphics: New

Description: New M8 insert on the deck top for kids mini rig / tandem, available on the 200 a 220.

Eva deck with clear rails, keeping your knees and board in good shape.

A Board that will not only get you through your first days, this is a board that you will always keep coming back to, even after you mastered all the basics.

The Surf guarantees anyone a fast entry into the windsurfing world, while still offering enough possibilities to progress and have fun for the more advanced riders. Getting in the straps, jibing, trimming upwind or racing downwind , it's all possible on these boards. The Surf 200 and 220 feature a fully retractable Allgaier® dagger board for maximized stability, while the Surf 150 features a center fin for increased dynamics. With 150, 200 and 220 liters this entry level board is crafted to your family's needs and school needs. A fun, progressing ride in our most durable construction.
