

THE NEW Sails

THIS PRESENTATION GIVES YOU A BRIEF **OVERVIEW OF THE CURRENT GOYA PRODUCT PORTFOLIO.**

Instead of writing up a bunch of superlatives about the new sails, we'll give you some unfiltered thoughts of **BRAWZINHO** after first riding them, with his special focus on the Banzai: "We worked on getting the sails to be and feel lighter as well as on increasing the range, and I believe we are seeing big improvements in all these areas. The new sails are a lot lighter in the top and feel a lot lighter on the back hand. I also feel like with this generation, many different set ups work very well."

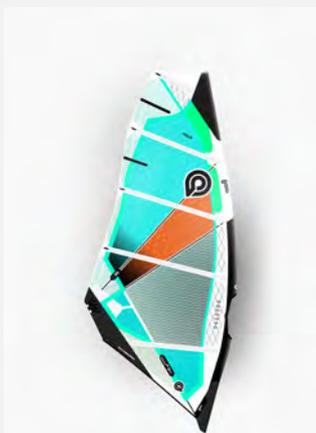

Banzai PRO™

Power Quad Wave

JASON DIFFIN about the new Banzai: "It is lighter, more flexible and has a better forward feeling in the hands, plus the new Banzai offers better high wind control in all sizes. A new size of 5.5 has been added. The Banzai has explosive low end power and a very direct feel. All wave and wave style sailing conditions are a blast with this sail, from down the line waves to onshore waves and freewave sailing. The Banzai is a top level progressive performance sail delivering ultimate power waveriding and jumping. Very well suited to multi fin boards." And **BRAWZINHO** adds "I have been riding the Banzai a lot flatter at Hookipa, which helps to de-power, but it still holds a shape and drive forward when the strong gusts hit. For on-shore conditions I have been riding it more full with amazing power and early planing. This sail is very easy to move from one side to the other, backside to frontside."

Eclipse PRO™

Power Wave

JASON DIFFIN about the new Eclipse: "Lighter and easier high wind handling in sizes up to 5.0. Sizes 5.3 and larger put an emphasis on quick stable power alongside easy handling. The Eclipse has great low end power, a massive high wind range plus unlimited speed potential. 5 battens make the Eclipse a very stable sail with easy handling when very powered up. All wave and wave style sailing conditions suit the Eclipse just as well as freewave and freestyle sailing. The Eclipse gives stability and range, along with a highly durable construction. Well suited to single fin and multi fin boards."

Guru G4 PRO™

Control Quad Wave

JASON DIFFIN about the new Guru: "The latest version of the very popular Guru model, the Guru G4 features the same effortless and comfortable handling feel that is the Guru legacy. Now in a new, lighter 4 batten layout. Smooth easy power delivery throughout all sizes, great low end power, easily neutralized. New sizes 3.2 and 3.5. Soft and light feeling allow for long sailing sessions without fatigue. The Guru lends itself to be used in all wave and wave style sailing conditions, from down the line waves to onshore waves and free wave style sailing. The PVC window provides life long clarity, and gives a smooth feeling to the sail. The Guru G4 is well suited to sailors of lighter weight in strong and gusty wind conditions looking for ultimate comfort and control. Extremely durable construction. Well suited to multi fin boards."

Guru S PRO™

Kids Quad Wave

JASON DIFFIN about the new Guru S: "Super light weight, very durable, very easy handling, a dedicated performance wave sail for kids. Target riders are kids and smaller riders under 45 kilos. The Guru S can be used in flat water for beginner training, when fully planing and of course in any wave condition, as the Guru S is modeled after the Guru G4 concept of extreme durability and easy, soft handling in a wide variety of wind and wave conditions. Learn, plane, jump, surf, loop, anything is possible with the Guru S. This is, after all, a performance wave sail."

Nexus PRO™

Free Ride

JASON DIFFIN about the new Nexus: "The new Nexus comes with lavish scrim body panels and carbon stretch control tendons. This upgrades the new Nexus to embody the best materials available, delivering uncompromised freeride and freerace performance. The new Nexus is significantly lighter, stronger and faster. You can expect magnetic low end power, easy handling with a massive high wind range and unlimited speed potential in any flatwater to bump and jump condition. The Nexus is all about simple speed. This sail has no cambers, making rigging a dream. The scrim body panels provide a quiet, supple ride. The smaller 6 batten sizes are cut for maneuvers then speed, while the larger 7 batten sails are cut for speed then maneuvers."

Surf PRO™

Family Fun

JASON DIFFIN about the new Surf: "A classic soft, luffable dacron trainer sail with a PVC window. This sail feels right at home at flat water beginner windsurfing. Dacron and PVC make for a very durable trainer sail that can be left rigged and on the spot for extended periods. Its bright color is very easy to spot from shore or across the water. The Surf is the sail of choice for all instructors, windsurf schools and self-taught adventurers. It's the sail we've designed to teach our own children. The Surf is the perfect choice for learning the basic principals of windsurfing."
